THE COMPANY

..with the confidence of an innovator

KALYMNOS FUEL ENGINEERING is a modern company active in the wider sector of fuels and particularly in the service equipment for fuel tanker trucks. The company is aiming to the future with its know-how and the target of achieving a dynamic presence in a sector beset by ever greater demands. From the outset, with carefully considered moves and planning, Kalymnos Fuel Engineering has followed a steady upward course aided by a strong and continuously expanding network of distinguished collaborators.

The company's headquarters are in Thessaloniki. It has its own facilities equipped with the very latest infrastructures, which include a storage area in Kalochoi and co-use of a production facility on the city's industrial estate.

The company was inspired and created by Ioannis Kalymnos. He graduated in Engineering and Aviation Engineering from the Polytechnic School of Patra and achieved the highest marks in his faculty; later certified as a consultant by the ministry of transport and as instructor on issues relating to high-risk commercial products at the Aristotle University of Thessaloniki, Ioannis Kalymnos, apart from his academic knowledge, has another important asset: his experience over many years.
